SUMMARY

Software Engineer experienced in building full-stack applications using Laravel, Django, and Python. Skilled in AI, computer vision, deep learning, and cloud platforms like AWS and Azure, with a strong foundation in problem-solving and teamwork.

PROJECT

MoodSync – Emotion Adaptive Music Recommendation System

- Engineered an AI-powered music recommendation platform that detects user emotions via facial expressions using deep learning and computer vision techniques.
- Developed a real-time emotion recognition model integrated with webcam input to deliver personalized song recommendations.
- Implemented machine learning algorithms and facial analysis pipelines to optimize recommendation accuracy.
- Architected a responsive web interface supporting interactive user sessions and mood-based playback.

Car & Bike Rental Management System

- Engineered a full-stack car and bike rental management platform utilizing Laravel and MySQL.
- Implemented secure user authentication, vehicle booking workflows, rental tracking, and administrative dashboard functionalities.
- Designed responsive frontend interfaces supporting vehicle listings, booking details, and customer management.
- Integrated relational database operations to manage vehicle availability, pricing structures, and booking histories.
- Optimized backend routing and database queries to enhance data handling efficiency and user navigation speed.

Fitness Freak Application

- Designed and developed a fitness application supporting personalized workout planning and user progress tracking.
- Implemented custom workout routine generators, daily fitness activity logs, and automated reminder notifications.
- Built an interactive interface to enhance user engagement and platform accessibility.
- Integrated progress analytics to help users monitor workout consistency and performance metrics.
- Conducted rigorous testing and debugging to optimize application performance and user experience.

Telegram Automation Bot

- Engineered Python-based automation bots for task management and server-side workflow execution.
- Integrated robust API handling, command parsing mechanisms, and continuous background processing routines.
- Deployed and managed bot services on Linux Virtual Private Server environments to ensure continuous uptime.

OVOO OTT — OTT Streaming Platform

- Developed OVOO OTT, an OTT streaming platform designed to provide users with a web-based experience for discovering and consuming digital video content.
 - Implemented core platform functionality for content discovery, user interaction, and video content delivery.
 - Designed responsive user interfaces to provide smooth navigation and an accessible viewing experience across devices.
 - Developed backend functionality and database operations to support application data and platform workflows.
 - Tested and debugged application functionality to improve reliability, usability, and overall user experience.
-

EDUCATION

Master of Technology - Computer Science and Engineering | Lovely Professional University

7.29, Punjab, India, August 2025

- CGPA: 7.29.

Bachelor of Technology - Computer Science and Engineering | Lovely Professional University

7.53, Punjab, India, June 2025

- CGPA: 7.53.

Diploma in Computer Science and Engineering | Lovely Professional University

8.76, Punjab, India, March 2022

- CGPA: 8.76.

10th Class | Campus School

7.3, Hisar, Haryana, March 2018

- CGPA: 7.3.

SKILLS

Languages & Databases: JavaScript, Python, PHP, C, SQL, MySQL

Frameworks: HTML, CSS, Django, Laravel

Tools & Domains: AWS, Azure, GitHub, VS Code, Deep Learning, Computer Vision

Soft Skills: Problem-Solving, Team Player, Communication, Time management, Creativity, Adaptability
